The project

coordinated by SINTAC

The objective is to design and implement **closed loops** for the reuse and recycling of **polyolefin plastic packaging** for industrial and commercial uses in **agri-food** sector. We maximise the reuse cycles and, at the end of their first useful life, we recycle the drums, jerrycans and crates to obtain a new quality secondary raw material, suitable to **produce new plastics packaging** with the same functionality properties, **plastic recycled content** and **EFSA food safety** requirements. This project is coordinated by the Circular Economy Project Department of SINTAC Recycling

Partners
